As a member of the G20, Indonesia is not a poor country anymore. However, millions of Indonesians still live in poverty and don’t have access to adequate healthcare.

The gap between rich and poor is a major problem which leads to a lack of healthcare services in remote areas of the country.

People in Kai Island, Southeast Maluku, Indonesia

People in the Highland of Papua, Indonesia
The infrastructure in the West of Indonesia is much better than in the East

Jakarta Highway, Western Indonesia  Highland of Papua, Eastern Indonesia
The Housing...

Honai – Highland of Papua, Eastern Indonesia

Jakarta’s Skyscrapers, Western Indonesia
The population distribution is not homogeneous: There are more than 20,000 people/km$^2$ in Jakarta & only 2-4 people/km$^2$ in Papua

Jakarta, Western Indonesia

Papua People, Eastern Indonesia
These facts show struggles and difficulties faced by our government in evenly distributing healthcare and public services.
As Indonesian citizens with integrity, we asked ourselves how we can help to empower local people and help them improve their welfare.
What do most people need?
Are we able to fulfill the needs?
Could our programs be implemented?
Do we have human resources to implement the programs?
To meet all of these difficulties, we created a Floating Hospital from a traditional Indonesian ship made of wood.
• We strongly believe that the Floating Hospital is one of the tools to solve the medical problems in Indonesia.
THANK YOU!
